SUMMARY

M.Sc. Computer Science student (B.Sc. CGPA: 9.56) with experience building full-stack web applications and ML-powered systems using Flask, React, Node.js, PostgreSQL, and Scikit-learn. Interested in backend development and practical AI applications.

EDUCATION

Fergusson College (Autonomous) Master of Science in Computer Science	SGPA 1: 9.10	Pune, Maharashtra Jul 2025 – May 2027
Sir Parashurambhau College (Autonomous) Bachelor of Science in Computer Science	CGPA: 9.56	Pune, Maharashtra Jul 2022 – May 2025

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript
Frontend: React, Bootstrap, HTML5, CSS3
Backend: Flask, Node.js, Express.js, FastAPI
Databases: PostgreSQL, MongoDB Atlas
Developer Tools: Git, GitHub, Jupyter, Colab, Docker
ML/Data: Scikit-learn, Pandas, Numpy, Matplotlib, Streamlit

PROJECTS

SkillConnect – Hackathon Team Matching Platform [Demo](#) | [GitHub](#) | Jan 2026

- Built and deployed a full-stack team matching platform using React, Node.js, Express, and MongoDB Atlas that analyzed GitHub profile languages to recommend developer roles (Frontend/Backend/ML/UI-UX), with frontend hosted on Vercel and backend on Render.
- Designed and implemented 15+ REST APIs for authentication, team formation, connection requests, and role recommendations, along with polling-based real-time notification workflows and dynamic frontend state updates for invites and approvals.

Customer Churn Analysis and Retention Prediction [Demo](#) | [GitHub](#) | Feb 2026

- Built end-to-end churn pipeline (Logistic Regression, 7,044 records) achieving Recall: 0.90, ROC-AUC: 0.84; Used SHAP to analyze features contributing most to churn prediction.
- Deployed Streamlit dashboard to visualize churn predictions and feature importance.

Accessible Quiz Platform for Visually Impaired Students [GitHub](#) | Nov 2024

- Built role-based quiz platform with voice command navigation and screen reader support; designed normalized PostgreSQL schema with JSONB answer storage, cascading deletes, and constraints to prevent duplicate submissions.
- Implemented Flask REST APIs with session-based authentication using Werkzeug and deployed using Gunicorn.

Personalized Study Coach [Demo](#) | [GitHub](#) | Nov 2025

- Built Flask-based study assistant using retrieval-augmented generation (RAG) over uploaded PDFs with question answering powered by Groq API.
- Built full-stack web app with user authentication, study schedule optimizer, progress tracking, and responsive Bootstrap UI. Deployed using Render and MongoDB Atlas.

EXTRA-CURRICULAR ACTIVITIES

Competitive Programming: Solved 200+ Data Structures & Algorithms problems on [LeetCode](#) and completed core language tracks on [HackerRank](#) to sharpen analytical problem-solving skills.
