SUMMARY

M.Sc. Computer Science student at Fergusson College with hands-on experience in Python, Machine Learning, and full-stack web development. Built and shipped projects spanning data science pipelines, RAG-based AI applications, accessible web platforms, and a React + Node.js hackathon platform.

EDUCATION

Fergusson College (Autonomous) <i>Master of Science in Computer Science</i>	Pune, Maharashtra Jul 2025 – May 2027
Sir Parashurambhau College (Autonomous) <i>Bachelor of Science in Computer Science — CGPA: 9.56/10.0</i>	Pune, Maharashtra Jul 2022 – May 2025

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript (*familiar*)
Libraries: Scikit-learn, Pandas, Numpy, Matplotlib, Seaborn
Frameworks: Flask, FastAPI, Streamlit, React 18 (*familiar*), Node.js/Express (*familiar*)
Databases: PostgreSQL, MongoDB Atlas (*familiar*)
Developer Tools: Git, Jupyter, Colab

PROJECTS

SkillConnect – Hackathon Team Matching Platform [GitHub](#) | Jan 2026

- Built full-stack platform (React 18, Node.js, Express, MongoDB Atlas, Tailwind CSS) with automated GitHub skill analysis mapping languages to developer roles (Frontend/Backend/ML/UI-UX)
- Implemented LinkedIn-style connection system, real-time notifications, team formation flow, and 15+ REST API endpoints.

Customer Churn Analysis and Retention Prediction [GitHub](#) | Feb 2026

- Built end-to-end churn pipeline (Logistic Regression, 7,044 records) achieving Recall: 0.90, ROC-AUC: 0.84; identified top drivers via SHAP explainability.
- Built interactive Streamlit dashboard for real-time churn risk visualization and business retention decision-making.

Accessible Quiz Platform for Visually Impaired Students [GitHub](#) | Nov 2024

- Built role-based quiz platform with voice command navigation and screen reader support; designed normalized PostgreSQL schema with JSONB answer storage, cascading deletes, and duplicate-submission constraints.
- Implemented production-grade Flask REST API with connection pooling and session-based authentication using Werkzeug and Gunicorn as WSGI server.

Personalized Study Coach [GitHub](#) | Nov 2025

- Developed RAG-powered study assistant using Groq API + Flask + PostgreSQL with context-aware Q&A and automated content summarization across uploaded documents
- Built full-stack web app with user authentication, study schedule optimizer, real-time progress tracking, and responsive Bootstrap UI.

EXTRA-CURRICULAR ACTIVITIES

Competitive Programming:

- Solved 200+ problems on [Leetcode](#).
- [HackerRank](#): Gold Badge in Python
