SUMMARY

M.Sc. Computer Science student at Fergusson College (SGPA: 9.1) with a strong foundation in Python, Machine Learning, and full-stack web development. Experienced in building and deploying AI-powered applications using Flask, Scikit-learn, and Streamlit. Seeking a Python internship to contribute to real-world data science or backend engineering projects.

EDUCATION

Fergusson College (Autonomous) <i>Master of Science in Computer Science — SGPA: 9.1 (Sem-1)</i>	Pune, Maharashtra Jul 2025 – May 2027
Sir Parashurambhau College (Autonomous) <i>Bachelor of Science in Computer Science — CGPA: 9.56/10.0</i>	Pune, Maharashtra Jul 2022 – May 2025

TECHNICAL SKILLS

Languages: Python, SQL
Libraries: Scikit-learn, Pandas, Numpy, Matplotlib, Seaborn
Frameworks: Flask, FastAPI, Streamlit
Developer Tools: Git, Jupyter, Colab

PROJECTS

Customer Churn Analysis and Retention Prediction [GitHub](#) | [Deployed Link](#) | Feb 2026

Tech Stack: Python, Scikit-learn, Pandas, NumPy, Streamlit, Matplotlib

- Built a churn prediction pipeline on 7,044 records using Logistic Regression, achieving Recall: 0.90 and ROC-AUC: 0.84.
- Identified top churn drivers (tenure, contract type, monthly charges) using SHAP explainability to guide retention strategies.
- Deployed real-time Streamlit dashboard for churn risk visualization and business decision-making.

Personalized Study Coach [GitHub](#) | [Deployed Link](#) | Nov 2025

Tech Stack: Python, Flask, Groq API, PostgreSQL, Bootstrap

- Developed AI-driven study assistant leveraging RAG (Retrieval-Augmented Generation) for context-aware Q&A and automated content summarization.
- Built study schedule optimizer with real-time progress tracking.
- Designed full-stack web app with Flask backend, PostgreSQL DB, user authentication, and responsive UI.

Accessible Quiz Platform for Visually Impaired Students [GitHub](#) | Nov 2024

Tech Stack: Python, Flask, PostgreSQL, SQLAlchemy, Werkzeug, Gunicorn

- Built a role-based quiz platform for visually impaired students with voice command navigation, screen reader support, and session-based authentication using Flask and Werkzeug.
- Designed a normalized PostgreSQL schema with cascading deletes, JSONB answer storage, and DB-level constraints to prevent duplicate submissions.
- Deployed a RESTful Flask API with production-grade PostgreSQL connection pooling and Gunicorn as the WSGI server.

EXTRA-CURRICULAR ACTIVITIES

Competitive Programming:

- Solved 200+ problems on [Leetcode](#).
- [HackerRank](#): Gold Badge in Python
